Education

Indian Institute of Information Technology, Una

B.Tech, Information Technology

Nov 2022 – Jun 2026

CGPA: 8.07/10.0 (Current)

Experience

Handlers

Remote

Software Engineering Intern

Oct 28, 2024 - Jan 26, 2025

- Developed and maintained cross-platform applications using Flutter, focusing on scalable UI and performance optimization.
- Collaborated with backend services (Spring Boot APIs) to ensure seamless frontend-backend integration.
- Integrated REST APIs and managed application data flow efficiently.
- Applied state management using GetX to build responsive and maintainable applications.
- Participated in code reviews and debugging sessions to improve system performance and reliability.

Projects

Airbnb Clone – Scalable Backend System | *Java, Spring Boot, PostgreSQL, JPA, REST APIs*

[GitHub](#)

- Designed and developed scalable, production-style REST APIs for an Airbnb-like platform handling complex booking workflows.
- Implemented dynamic hotel search with optimized queries, eliminating N×M complexity using inventory-based modeling.
- Built booking system ensuring transactional integrity and proper relational mapping between users, hotels, and inventory.
- Tested APIs using Postman and validated edge cases for booking workflows.
- Integrated Spring Security with JWT-based authentication and role-based access control.
- Integrated Stripe payment gateway for secure transactions and refunds, ensuring reliability in financial workflows
- Integrated Stripe payment gateway for secure transactions and refunds, ensuring reliability in financial workflows
- Designed system keeping scalability in mind with scope for async processing (Kafka/event-driven architecture)

KrishiBazaar – Marketplace App | *Flutter, Provider, REST APIs*

[GitHub](#)

- Developed a farm-to-customer marketplace enabling farmers to sell produce directly to buyers without intermediaries.
- Implemented categorized product listings and a seamless purchase flow for direct transactions.
- Used Provider with MVVM architecture to ensure a clean, scalable, and maintainable codebase.
- Integrated government APIs to fetch and display real-time commodity and market price insights.

ChronOS – CPU Scheduling Simulator | *C++, OOP*

[GitHub](#)

- Built a full-featured CPU Scheduling Simulator supporting both preemptive and non-preemptive algorithms including FCFS, SJF, Priority, and Round Robin.
- Accepted dynamic user input for arrival time, burst time, priority, and time quantum.
- Implemented a modular C++ architecture with separate classes for each scheduling algorithm.
- Calculated and displayed average waiting time, turnaround time, and completion time for each process.

Technical Skills

Languages: Java, SQL, C++

Backend: Java, Spring Boot, Spring Security, Spring Data JPA, Hibernate, RESTful APIs, OAuth2, JWT, Unit Testing (JUnit / basic), API Testing (Postman)

Database: PostgreSQL, MySQL, Relational Schema Design

Concepts: OOP, Data Structures, DBMS, OS, API Design, Backend Debugging, Microservices basics

Tools: Git, GitHub, Postman, Swagger/OpenAPI

Achievements

Competitive Programming: CodeChef (HR:1679)([CC](#)), LeetCode (330+ Questions) ([LC](#)), Codeforces (HR:1469) ([CF](#))

Backend Focus: Designed scalable Spring Boot APIs with validation, exception handling, and optimized database interactions.
